

DP-203 Microsoft Azure Data Engineer

NoSQL - CosmosDB

28th July 2021

Vinodkumar Bhovi

RDBMS were lacking

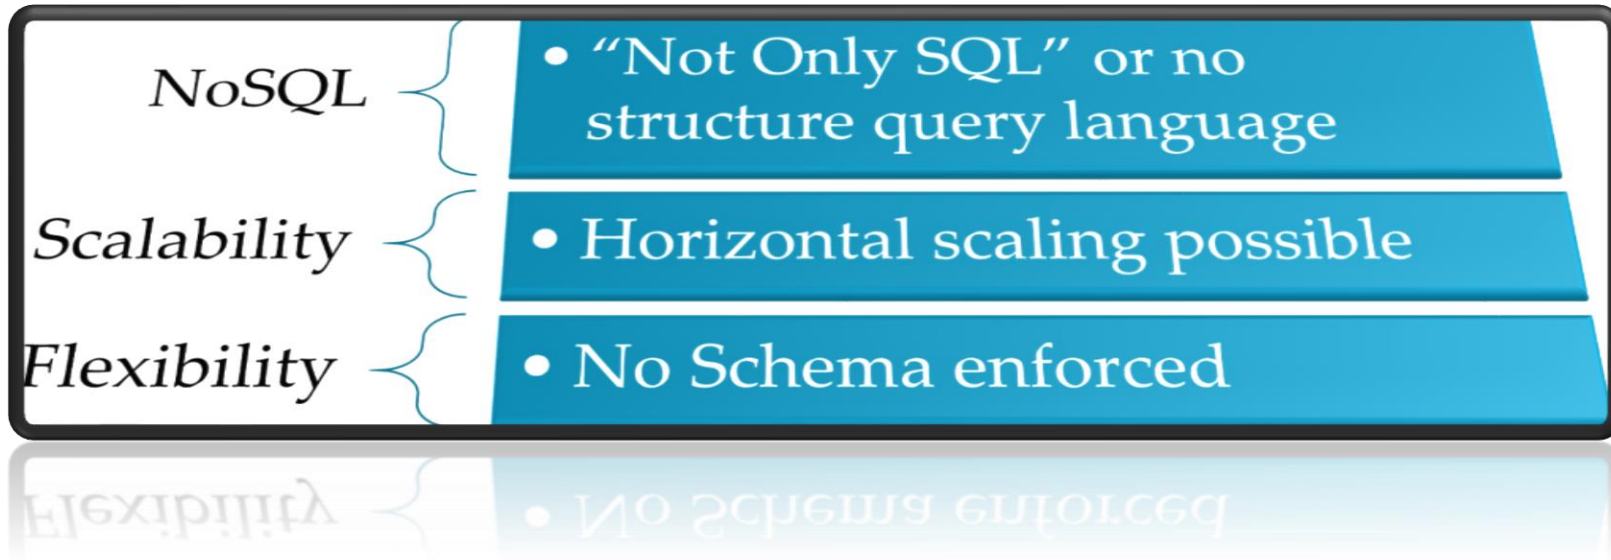

Scalability

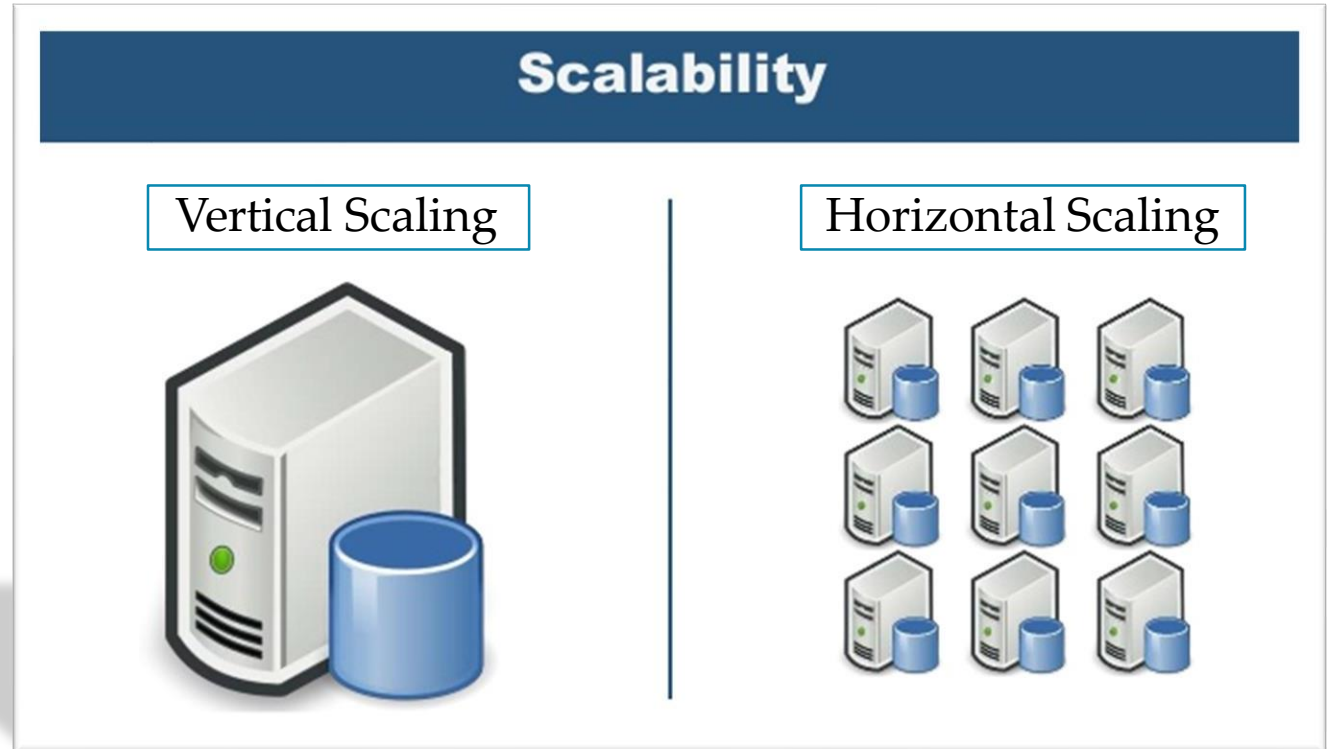

Flexibility

What is NoSQL

- Vertical scaling
 - Add more CPU, RAM, HDD in same system
- Horizontal Scaling
 - Add more commodity machines in system

Orders (dbo)	
OrderID	
OrderDate	
FirstName	
LastName	
Address	
City	
State	
PostalCode	
Country	
Phone	
Total	

OrderDetails (dbo)	
OrderDetailID	
OrderID	
ProductID	
UnitPrice	
Quantity	

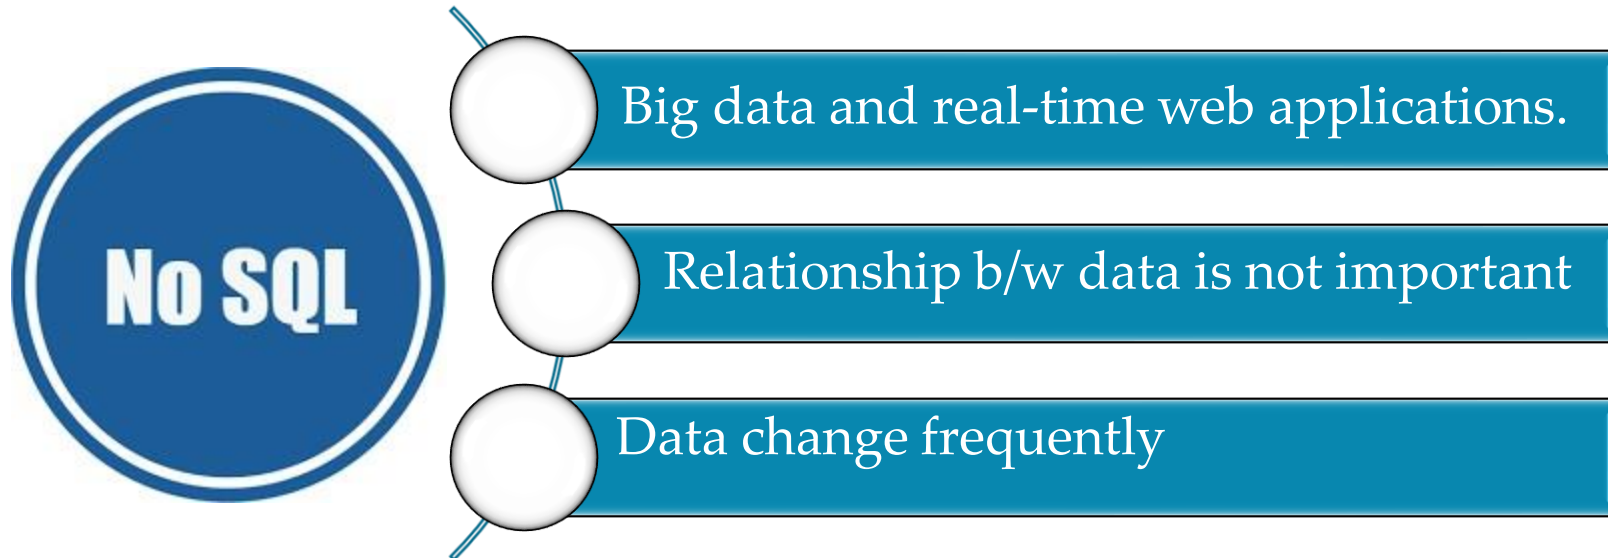

```

{
  "OrderId": 1,
  "OrderDate": 1574161910220,
  "FirstName": "John",
  "LastName": "Smith",
  "Address": "10 Street",
  "City": "City",
  "State": "VA",
  "OrderDetails": [
    {
      "UnitPrice": 7.99,
      "OrderDetailId": 2,
      "Quantity": 1,
      "ProductId": 259694,
      "OrderId": 1
    },
    {
      "UnitPrice": 7.99,
      "OrderDetailId": 3,
      "Quantity": 1,
      "ProductId": 295693,
      "OrderId": 1
    }
  ],
  "id": "795c50dc-1a83-11ea-bf07-00163ee85f66",
  "_rid": "VdgtAK230MANAAAAAAAAA==",
  "_self": "dbs/VdgtAA==/colls/VdgtAK230MA=/docs/VdgtAK230MANAAAAAAAAA==/",
  "_etag": "\"370017e1-0000-1100-0000-5df770f20000\"",
  "_attachments": "attachments/",
  "_ts": 1576497394
}

```

```
{
  "orderid": 12212,
  "orderdate": "12/4/2020",
  "customer":
    { "name": "Bob Smith", "email": "bobsmith@email.bob" },
  "status": "in process",
  "paymentmethod": "invoice",
  "products": [
    { "name": "Product 1", "quantity": 1 },
    { "name": "Product 2", "quantity": 1, status: 3 }
  ]
}
```

NoSQL Use Cases

NoSQL Limitations

SQL vs NoSQL

SQL

- Relational database
- Fixed schema
- Designed for complex queries
- SQL, MySql, Oracle, Postgres
- Vertical scaling
- Row Oriented
- Tables
- Limited for big data

NoSQL

- Non-relational or distributed
- Dynamic
- Not for complex queries
- MongoDB, Redis, Hbase
- Horizontal scaling
- Multi-model oriented
- Collections
- Great for big data

4 Types of NoSQL Databases

Document

Graph

Key-Value

Wide-column

Key-value store

Key-Value

Phone Directory

Key	Value
Bob	(123) 456-7890
Jane	(234) 567-8901
Tara	(345) 678-9012
Tiara	(456) 789-0123

- Uses a simple key/value to store data
- Quick to query due to its simplicity
- Value can be JSON, BLOB, String etc.
- Use Cases:
 - User profiles and session info on a website, blog comments, telecom directories, IP forwarding tables, shopping cart contents on e-commerce sites, and more.
- Examples
 - Cosmos DB Table API, Redis, Table Storage, Oracle NoSQL Database, Voldemorte, Aerospike, Oracle Berkeley DB

Document store

Document

```
{
  "orderid": 12212,
  "orderdate": "12/4/2020",
  "customer":
    { "name": "Bob Smith", "email": "bobsmith@email.bob" },
  "status": "in process",
  "paymentmethod": "invoice",
  "products": [
    { "name": "Product 1", "quantity": 1 },
    { "name": "Product 2", "quantity": 1, status: 3 }
  ]
}
```

- Document-oriented model to store data
- Similar to key/value store, difference is that, the value in a document store database consists of semi-structured data.
- Each record and its associated data within a single document.
- Document stores are usually XML, JSON, BSON, YAML, etc.
- Use Cases:
 - Content management systems, blogging platforms, and other web applications, blog comments, chat sessions, tweets, ratings, etc.
- Examples
 - Cosmos DB, MongoDB, DocumentDB, CouchDB, MarkLogic, OrientDB

Column store

UserProfile

	emailAddress	gender	age
Bob	bob@example.com	male	35
	1465676582	1465676582	1465676582

	emailAddress	gender
Britney	brit@example.com	female
	1465676432	1465676432

	emailAddress	country	hairColor
Tori	tori@example.com	Sweden	Blue
	1435636158	1435636158	1465633654

- Stores data using a column oriented model
- Columns in each row are contained within that row
- Each row can have different columns to the other rows.
- Extremely quick to load and query
- Use Cases:
 - Sensor Logs [Internet of Things (IOT)], User preferences, Geographic information, Reporting systems, Time Series Data, Logging and other write heavy applications
- Examples
 - Cosmos DB, Bigtable, Cassandra, Hbase, Vertica, Druid, Accumulo, Hypertable

Graph store

Graph

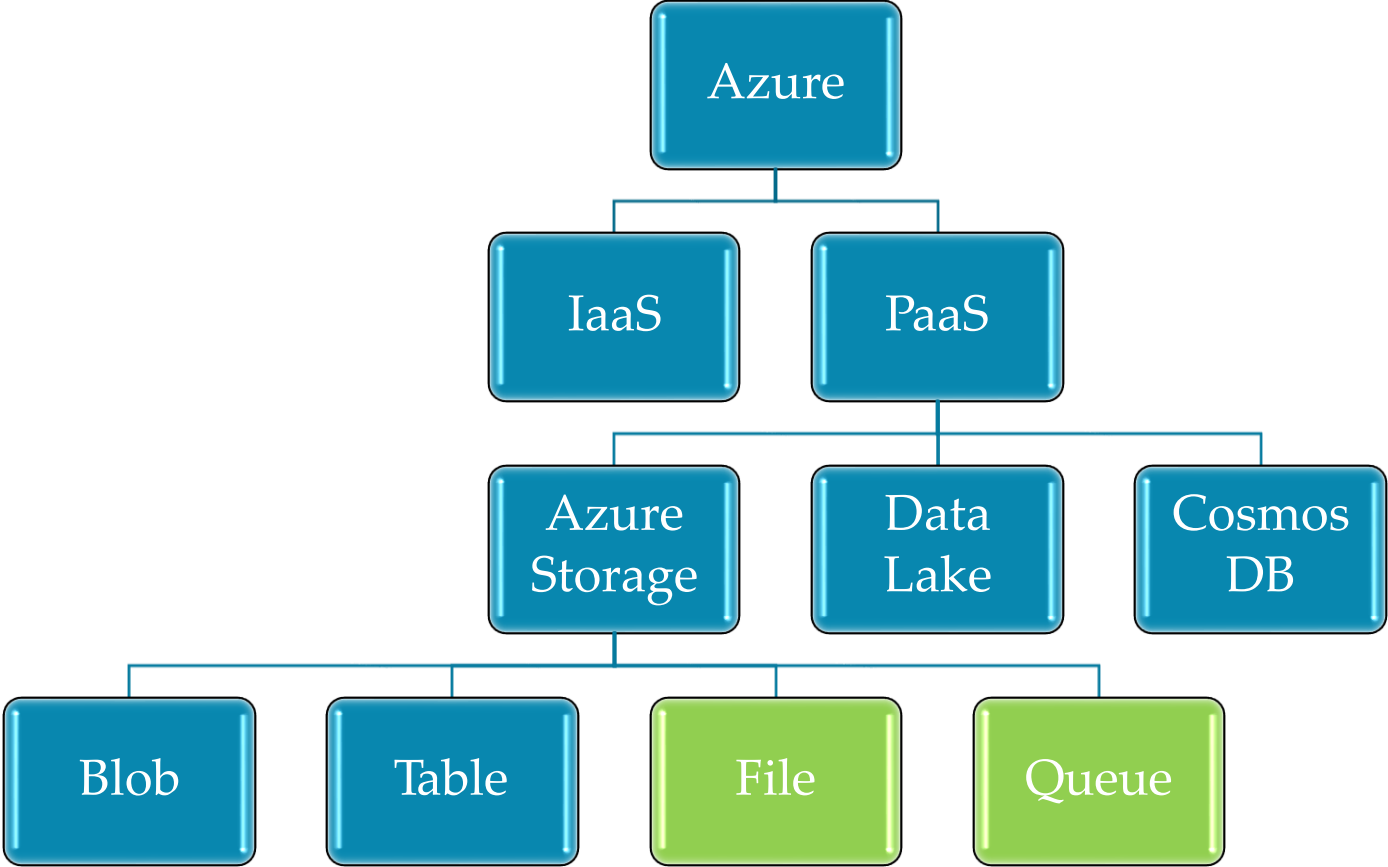

- Focuses on how data relates to other data points.
- A node is a specific entity or piece of information
- Edge simply specifies the relationship between two nodes.
- Use Cases:
 - Social networks, realtime product recommendations, network diagrams, fraud detection, access management, and more.
- Examples
 - Cosmos DB Gremlin API, Neo4j, Blazegraph, and OrientDB.

Multi-model

- Include features/characteristics of more than one data model.
- **Example:**
 - **OrientDB:** OrientDB combines a graph model with a document model.
 - **ArangoDB:** Uses key/value, document, and graph models.
 - **Virtuoso:** Combines relational, graph, and document models.

NoSQL Offerings by Microsoft Azure

Advantages of Blob storage

- Extremely cheap
- Simple to setup
- No configuration
- Doesn't require powerful computing to manage

Microsoft Azure
Blob Storage

Limitations of Blob storage

- No Indexes
- No Search Tools
- Not optimized for performance
- You are responsible for replication and synchronization
- Requires external compute to process

Microsoft Azure
Blob Storage

What is Cosmos DB?

Globally Distributed multi model database service for mission critical applications

Why Cosmos DB?

FULLY MANAGED

- Database as a service (DaaS)
 - Serverless architecture
 - No operational overhead
- No schema or Index management

GLOBALLY DISTRIBUTED

- Turnkey global distribution

MULTIMODEL & MULTI-LANGUAGE

- Supports Json documents, table graph and columnar data models
 - Java, .NET, Python, Node.js, JavaScript, etc.

CONSISTENCY CHOICES

- Azure Cosmos DB's support for consistency levels like strong, eventual, consistent prefix, session, and bounded-staleness.

SCALABLE

- Unlimited scale for both storage and throughput.

HIGHLY AVAILABLE, RELIABLE & SECURE

- Always on
- 99.999% SLA
- < 10ms latency

Use case - IOT

Use case – Retail and Marketing

Use case – Gaming

Use case – Web and mobile

NoSQL

Key-Value

Column-Family

Graph

Document

Table

SQL API vs MongoDB API

SQL(CORE) API

JSON Documents

Microsoft original Document DB platform
Supports server side programming model

You can use SQL like language to query
JSON documents.

MongoDB API

BSON Documents

Implement Wire protocol

Fully compatible with Mongo DB application code

Migrate existing Cosmos DB without much
change of logic

Use SQL(CORE) API for new development

JSON File

JavaScript objects are simple associative containers, wherein a string key is mapped to a value (which can be a number, string, function, or even another object)

```
{
  "_id": 1,
  "name" : { "first" : "John", "last" : "Backus" },
  "contribs" : [ "Fortran", "ALGOL", "Backus-Naur Form", "FP" ],
  "awards" : [
    {
      "award" : "W.W. McDowell Award",
      "year" : 1967,
      "by" : "IEEE Computer Society"
    }, {
      "award" : "Draper Prize",
      "year" : 1993,
      "by" : "National Academy of Engineering"
    }
  ]
}
```

BSON File

BSON simply stands for “Binary JSON,” and that’s exactly what it was invented to be. BSON’s binary structure encodes type and length information, which allows it to be parsed much more quickly.

```
 {"hello": "world"} →  \x16\x00\x00\x00 // total document size
                        \x02 // 0x02 = type String
                        hello\x00 // field name
                        \x06\x00\x00\x00world\x00 // field value
                        \x00 // 0x00 = type E00 ('end of object')

 {"BSON": ["awesome", 5.05, 1986]} →  \x31\x00\x00\x00
                                       \x04BSON\x00
                                       \x26\x00\x00\x00
                                       \x02\x30\x00\x08\x00\x00\x00awesome\x00
                                       \x01\x31\x00\x33\x33\x33\x33\x33\x33\x14\x40
                                       \x10\x32\x00\xc2\x07\x00\x00
                                       \x00
                                       \x00
```

Cosmos DB Table API

Key-Value

- Key-Value store
- Premium offering for Azure Table Storage
- Existing Table Storage customers will migrate to Cosmos DB Table API
- Row value can be simple like number or string
- Row cannot store object

Cosmos DB Cassandra API

Wide-column

- Wide column No SQL Database
- Name and format of column can vary from row to row.
- Simple migrate your Cassandra application to Cosmos Cassandra API and change connection string.
- Interact
 - Cassandra based tools
 - Data Explorer
 - Programmatically, using SDK (CassandraCSharpdriver)

Cosmos DB Gremlin API

Graph

- Graph Data Model
- Real world data connected with each other
- Graph database can persist relationships in the storage layer

Graph Model

Cosmos DB Gremlin API

Graph

- Graph Data Model
- Real world data connected with each other
- Graph database can persist relationships in the storage layer
- Use cases
 - Social networks
 - Recommendation engines
 - Geospatial
 - Internet of things
- Migrate existing apps to Cosmos DB Gremlin API
- Graph traverse a language

Analyze the decision criteria

	Core (SQL)	MongoDB	Cassandra	Azure Table	Gremlin
New projects being created from scratch	✓				
Existing MongoDB, Cassandra, Azure Table, or Gremlin data		✓	✓	✓	✓
Analysis of the relationships between data					✓
All other scenarios	✓				

Azure Table storage vs Cosmos DB Table API

- Cosmos DB Table API is a prime version of Azure Table Storage

Azure Table Storage

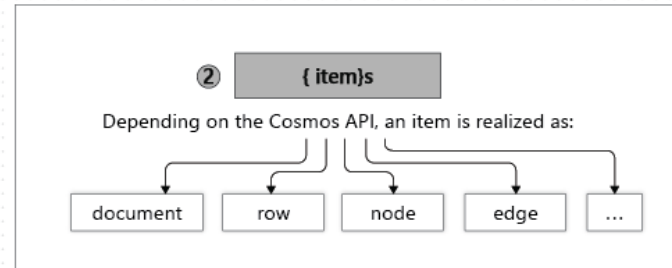

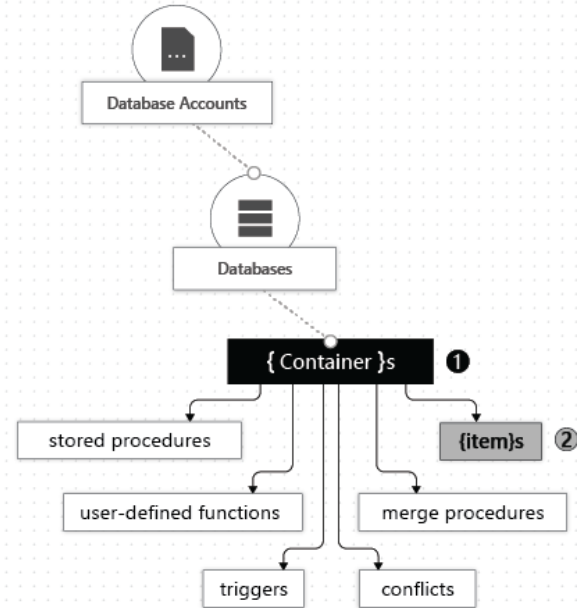

- Geo replication is restricted
 - Only 1 additional pair region
- Support for primary key lookups only
- Price optimized for cold storage
- Lower performance
 - Throughput is capped
 - Latency is higher
- No consistency options

VS

Cosmos DB Table API

- Geo replication across your choice of any number of regions
- Secondary index support for lookups across multiple dimensions
- Better performance
 - Unlimited and predictable throughput
 - latency is lower
- 5 consistency options

Database Containers and Items

Azure Cosmos entity	SQL API	Cassandra API	MongoDB API	Gremlin API	Table API
Azure Cosmos database	Database	Keyspace	Database	Database	NA
Azure Cosmos container	Container	Table	Collection	Graph	Table
Azure Cosmos item	Document	Row	Document	Node or edge	Item
